Aristo Goals and Aristo
Solutions

1.1 Aristo Goals

Aristo is a ERC20 token that aims investors select just one token instead of having several cryptocurrency coins and have the benefit from most successful cryptos. We came to know having several coins in a basket is very confusing for most investors and made a special algorithm with a professional team to accept this struggle in behalf of clients and make fortune from even small investments, behind the scene our team analyze and collect all prospect of cryptocurrency market and trade your funds to make best figure. The Aristo token limit is the moon , so let's experience mooning together!

Our multidisciplinary , extremely ambitious and passionate team including Post DBA, DBA, data science, software, machine learning graduates, all got many years experience in the stock and cryptocurrency market.

Aristo Solutions

- **Secure Investment**

Cash is king, a king is someone who can do what he /she wants when he wants. In the business world where there are lots of uncertainties, a businessperson can do what the businessperson wants when he wants it only with cash. All other assets are not as liquid as the cash. Cryptocurrencies are the same as cash. There are applications for a computerized transaction protocol using smart contracts. The concept of Ricardian contracts as proposed by Ian Grigg in 1996 provides insight into the realm of use cases for this technology. Innovations include using a cryptographic hash function for identification and defining legal elements as machine-readable by a computer. By being able to execute a set of instructions (via a smart contract) and associate it with an accounting system(via a blockchain), the Ethereum platform can be used to run a number of different dapps. The Aristo token is hosted on the Ethereum network. ERC20 tokens are the most secure assets in the crypto currency market and you can decide any time to sell or swap them with other assets. You can sell them or keep them to rise in price. Of course because of using high end technology and algorithm token price rise reasonable and holding tokens will be much more profitable than exchange.

Aristo Solutions (page2)

- **Exchange Aristo Token**

Aristo will be listed on different ERC20 exchanges. Everyone can buy and the amount of tokens available in the market will be less and less every day. This is our anti inflation strategy, this makes the price go up automatically. Aristo tokens are developed by Solidity, Solidity is an object-oriented, high-level language for implementing smart contracts. Smart contracts are programs which govern the behaviours of accounts within the Ethereum state. Solidity was influenced by C++, Python and JavaScript and is designed to target the Ethereum Virtual Machine (EVM). Solidity is statically typed, supports inheritance, libraries and complex user-defined types among other features. With Solidity you can create contracts for uses such as voting, crowdfunding, blind auctions, and multi-signature wallets.

02

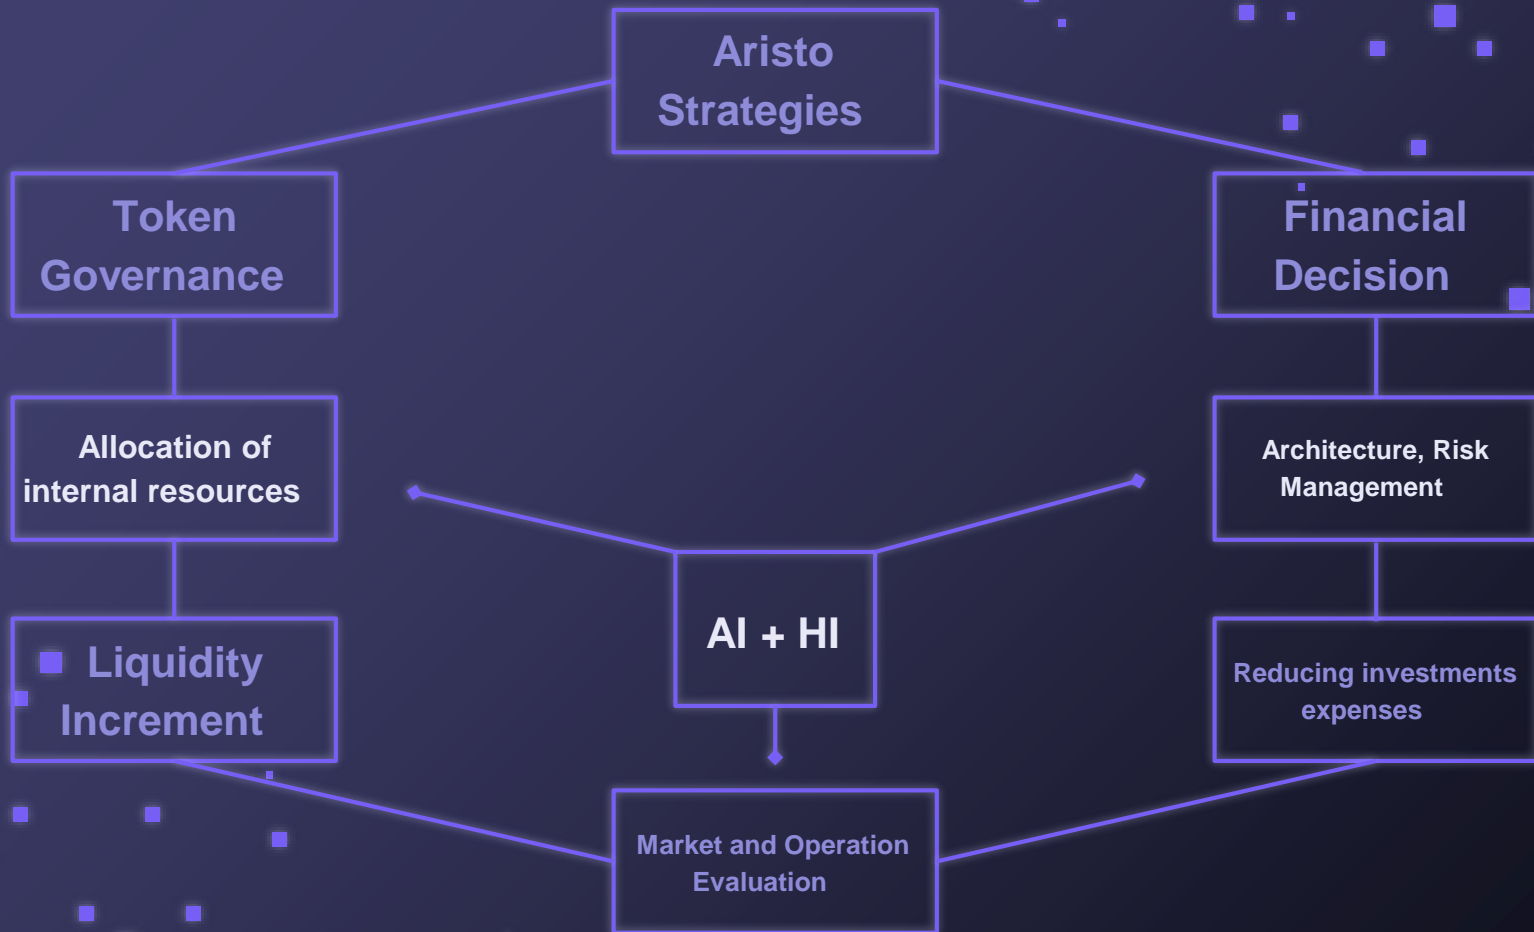

How it works

1.2 How it works

Money has a time value, because the alternative to spending it now is to save it(lend it to someone), postponing consumption to a later date only to be able to consume more later, which can only happen if the lender pays back more money than he borrowed. The difference is the time value of money. When you buy an Aristo token system invest your money in the most profitable assets of day , week, month and all time and by using special tools secure the profit and switch between different assets and investment opportunities, Aristo find a secure way for your liquidity to work for you in state of the art manner, as much as you invest you can have bigger slice of this pie but even with few tokens you have this chance to experience mooning with others. All focus is on gaining profit with right and secure investment. After transforming any asset, the whole gain is calculated and increases the token price accordingly. There are different anti inflation strategies that expedite mooning as well.

Next decade will be the decade of Artificial Intelligence and IOT , Aristo hire professionals and use AI for best results. AI is the best tool for forecasting , foresight, evaluating the past and present then predicting possible futures.

When you buy Aristo tokens , your investment directly goes to a pool and Hybrid Intelligence will select a short and long strategy for your asset. The only things you need is a smartphone and an internet connection.

The background is a dark blue gradient. It features several light blue geometric elements: thin lines forming right angles and small squares of varying sizes scattered across the frame. Some lines have small diamond shapes at their ends, pointing towards the central text area.

A healthy business unit depends on achieving the right balance between long-term goals and short-term opportunities. The most important limitation of short-term opportunities is that they should not be taken when there is a large risk that could harm the life of the organization

03

Aristo Token Information

Aristo is an Ethereum
blockchain Token

The background is a dark purple gradient. It features several thin, light purple lines that form a step-like pattern across the top half of the image. Scattered throughout the background are small, light purple squares of varying sizes, some of which are slightly blurred, giving a sense of depth or motion.

Unique Product Influence

Fine Basket Of Currencies

The background is a dark blue gradient with a network of thin, light blue lines and small squares. Some lines are horizontal, some vertical, and some form right-angled turns. Small squares of varying sizes are scattered throughout, some appearing as solid blue and others as white outlines. The overall effect is a digital or circuit-like pattern.

Given that technology means by definition a systematic knowledge of how natural and artificial things function and interact the product uniqueness implies that one is able to generate and apply in a product form such new knowledge which the others do not have. Did you ever think to invest in cryptocurrencies? What was the reason that you are still waiting? Of course it is Fear , for those who did not buy crypto there are Dilemmas fear and FOMO, and for those inside the market main issues are greed and fear as well. Every one invests and hopes to have some profit out of it, but cryptocurrencies, volatile markets and sharks time to time movements raise huge risks. Even if you stick to an analyst with accurate decisions all decisions do not go through.

Aristo is a crypto that can make the best return for your investment, With Aristo you will let professional people and AI handle the risk.

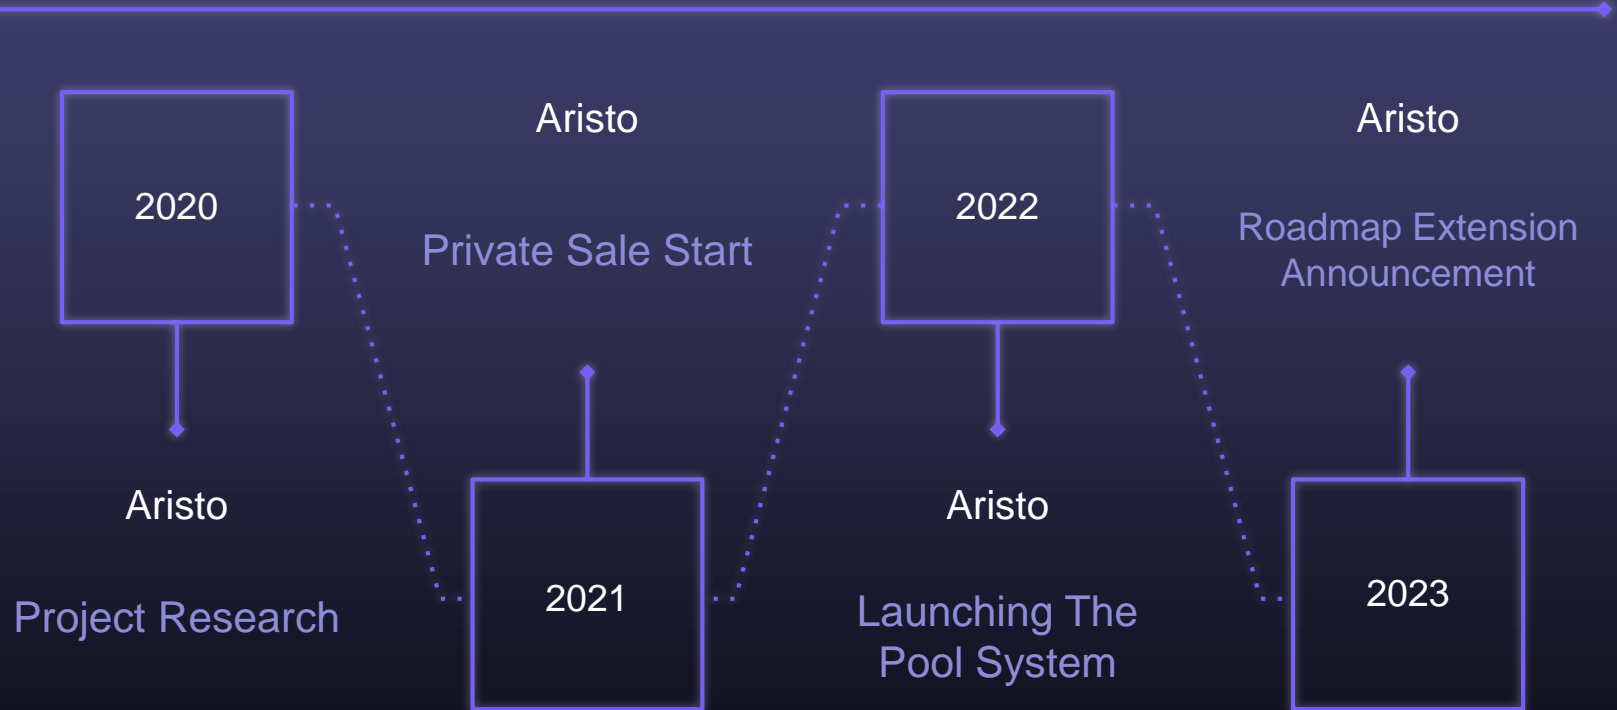

2-1 Fine Basket Of Currencies

There is a confusion between cryptocurrency investors and traders always , they have to read so much and check all indicators one by one, go to all trends and events to find out buy and sell signals , more assets and more confusing ,many miscalculation and lose because of price changes in pump or dump. In Aristo we made it easy for you, one crypto instead of a bunch of different cryptos with different patterns and ups and downs.

You just need to buy Aristo and we keep eyes on the price of crypto currencies, in particular bitcoin. You don't need to invest and waste a lot of time to have enough knowledge about all market coin caps and daily changes and innovations , Aristo will do that on your behalf

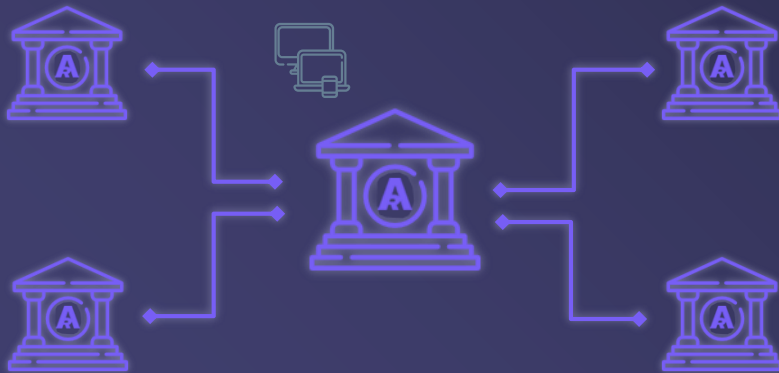

Roadmap

Decentralized Financial System

TRADITIONAL
FINANCIAL SYSTEM

DECENTRALIZED
FINANCIAL SYSTEM

Traditional Financial System is too old and inefficient in today's world, Banks govern by government politically and fiat currencies get printed upon political leaders and parliaments easily and carelessly. Centralized financial system is like a maze and corrupt people can hide in each corner. Decentralized Finance (DeFi) is all about monetary systems using public blockchains. The need for DeFi comes from the fact that financial services are not available to everyone around the world. Almost 1.7 billion people all around the world have no means and access to financial services. Decentralized finance (commonly referred to as DeFi) is an experimental form of finance that does not rely on central financial intermediaries such as brokerages, exchanges, or banks to offer traditional financial instruments, and instead utilizes smart contracts on blockchains, the most common being Ethereum DeFi platforms allow people to lend or borrow funds from others, speculate on price movements on a range of assets using derivatives, trade cryptocurrencies, insure against risks, and earn interest in savings-like accounts. Some DeFi applications promote high interest rates, but are subject to high risk. By October 2020, over \$11 billion was deposited in various decentralized finance protocols, which represented more than a tenfold growth during the course of 2020. As of January 2021, approximately \$20.5 billion was invested in DeFi. Anyone anywhere can join the DeFi community freely and without any restriction.

From the beginning there was a serious resistance about this new technology and many financial institutions those acting very conservative call it fraud and Ponzi game, it is obvious in financial industry any unproven tool and gadget can not enter easily, but over past years blockchain proved successfully that can make a very safe and reliable platform for cryptocurrencies and decentralized financial system. Unbelievable resistance from the beginning that still we are facing in traditional markets was quite healthy for industry and made this test more accurate and successful.

Our Mission

Aristo created a crypto for beginners and professionals to make the best possible basket of cryptocurrencies by using Artificial intelligence and professional experience to save investor time and efforts studying this new market day by day.

Our Vision

Aristo Serves clients with a clear need and guides beginners and professionals enter to cryptocurrency market with min risk and better performance by using hybrid intelligence (HI)

Aristo Platform Architecture

You may ask how reliable HI is for forecasting and price prediction?

Its obvious machine alone can not do anything, our professional team should decide the strategy and how to drive numerical price prediction machines.

Combination of human intelligence and Artificial intelligence make our goals possible. When our professional program the machine , the machine learns from them and does the job faster and more accurately than humans, this hybrid model (human brain and Artificial intelligence) is the key for smart decisions.
